Project Engineer – Flight Management Platform
Constance/Munich

The role:
We are looking for an outstanding project engineering to join our consulting team shaping the future of flight management for drones and air taxis. In this position, you will be involved with customers, partners, regulators and governments. In the early days, you will work with management and mission engineers on developing additional consulting services. Further down the line, you will provide these consulting services to our customers.

Your Day to Day:
• Represent the company with customers, partners and regulators around the globe
• Consult clients on unmanned aircraft operations and certification
• Manage key stakeholders and support customer acquisition
• Active involvement in the review and development of short & long-term strategy by developing robust financial forecasts & models to support the priorities of the business
• Develop a thorough understanding of customer journeys and derive requirements for our flight management platform and consulting services
• Improve the consulting portfolio
• Work closely together with the frontend and backend developers
• Actively help shaping processes within the company

Your Profile:
• M.Sc. or B.Sc. or 1-3 years of work experience after completing your undergraduate degree
• Consulting expertise and a background in aviation is a strong plus
• High level of self-reliance and an autonomous target-oriented work style is a must
• Excellent communication skills, both written and spoken
• Ability to grow and lead a team, clear communicator
• Fluent English language skills are essential, fluent German or any other language would be beneficial
• Occasional business trips required
